

Top 5 Reasons

Nutanix AHV is Your Best Virtualization Alternative

1

Run AI Workloads, Anywhere

Deploy and run the latest AI applications across your enterprise core, edge and supported public clouds while enabling strong data privacy and control.

2

Simple to Migrate to, Manage and Scale

Designed to be modern, user-friendly and simply managed within the [Nutanix Cloud Platform](#) solution. Additionally, with the [Nutanix Move tool](#), migrations are streamlined.

3

A Modern Hypervisor with a Robust Enterprise Feature Set Across Hybrid Clouds

Facilitates the mobility of applications and data, including generative AI workloads, across hybrid cloud environments to take full advantage of your cloud operating model.

4

Support VMs and Cloud-Native Workloads with a Large Ecosystem

Enables seamless integration of traditional VM-based and containerized applications within cloud-native environments to help provide flexibility without sacrificing functionality or performance of all of your workloads.

5

Secure by Design, Secure in Operation

With built-in comprehensive security measures, data protection and privacy features, you can utilize built-in tools to support your security postures, such as NIST and zero-trust architectures, providing robust protection for data and applications.
