

Traditional architectures force a choice.

IT is pushed to choose between simplicity and flexibility as environments scale and workloads diversify.

- Coupled storage and compute
- Costly stranded capacity
- Disruptive modernization

That tradeoff no longer works.

Today's environments must support mixed workloads and constant change without forcing teams to relearn tools or rearchitect everything.

- AI, containers, VMs
- Scaling pressure
- Cost efficiency at scale

Dell Private Cloud deploying Nutanix

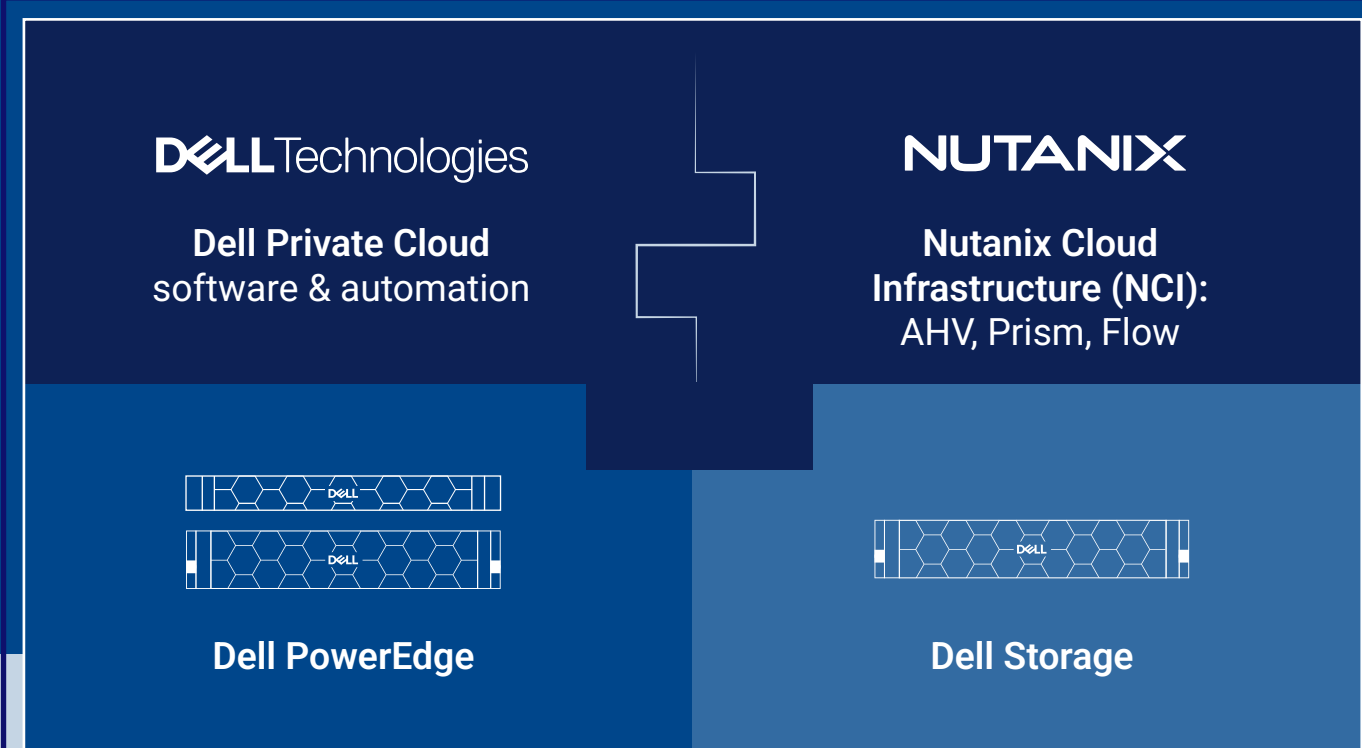

Independent scaling. Ultimate flexibility.

Dell Private Cloud deploying Nutanix supports external Dell storage with PowerFlex and PowerStore* for Nutanix Cloud Infrastructure (NCI), enabling independent scaling of compute and storage, while allowing organizations to reuse existing or deploy new Dell storage.

- Disaggregated architecture
- External Dell storage options
- Optimized for diverse workloads
