

5 Steps to Navigate Enterprise AI

While enterprises recognize AI as a priority, most are still seeking the best ways to get started or are early in the adoption curve. Enterprise AI use cases are rapidly maturing, and with a little planning around infrastructure, data security and cost, it's never been easier to get started. The right technology partners will help you overcome skills gaps and accelerate time to results.

Enterprise AI focuses on delivering enhanced business outcomes like productivity gains, revenue growth, value creation and improved decision-making.

Here are five steps to put your organization on the path to meaningful enterprise AI adoption.

01 Pick a use case.

There are several straightforward AI use cases to choose from. Tackle one of these to build valuable experience and skills. Leverage a partner's expertise if you need help getting started.

Enterprise AI Use Cases

Intelligent document processing

02 Choose flexible, AI-ready infrastructure.

Will you rely on the cloud? Build a custom AI stack? Choose a turnkey solution?

According to IDC, "Most organizations expect to deploy AI workloads across a hybrid mix of cloud, edge, and dedicated infrastructure." Careful planning and smart choices will avoid unnecessary complexity and result in a more future-proof solution.

believe it's time to modernize infrastructure for AI

03 Protect AI resources.

Protect and control confidential, proprietary, or personal information. Plan for your data to end up in multiple locations, and ensure that you can deliver the necessary performance, security and data protection everywhere—including protection for LLMs and APIs.

emphasize AI security and reliability and plan to enhance data protection and DR

04 Plan ahead to control AI costs.

Many organizations are concerned that AI costs will spiral out of control. Aligning business outcomes to key enterprise AI initiatives requires a flexible, turnkey platform for enterprise AI that delivers predictable costs and far fewer surprises.

agree that AI will increase IT costs and cloud spending.

identified managing AI model training costs as their top tech strategy risk factor.

05 Extend your AI operations.

After you've tackled the AI use cases, extend your enterprise AI operations to reach customers or employees everywhere. If you planned carefully and chose the right infrastructure, AI protections and cost control, you'll be able to deploy in the cloud and at the edge with minimal complexity, risk and cost.

Start Your AI Transformation

Nutanix Enterprise AI provides everything you need to develop and run scalable AI apps, including large language models and secure APIs.

Runs everywhere – in the datacenter, at the edge and in the cloud.

Built-in data services simplify moving, managing and protecting data.

Bring your own model or choose an approved model from one of our partners.

Lower TCO plus cost monitoring and management across on-premises, cloud and edge.

Nutanix has held a 90+ Net Promoter Score for nearly a decade, ranking among the highest in customer loyalty and satisfaction. And our ecosystem of enterprise AI partners ensures you have the latest models and tools to meet your needs.

Access our guide to help you choose use cases and successfully deploy AI and other cloud native applications that accelerate your business.
