

One Simple Solution

to Drive Enterprise AI Success

Deploy AI-ready infrastructure faster, without the need for expensive GPU investments right away. Unlock the AI potential within your existing infrastructure.

CoreStart from Nutanix is a comprehensive turnkey inference solution for Enterprise AI. It enables organizations running or investing in Intel® Xeon® processors to maximize their AI inferencing potential by leveraging Intel® AMX technology built into all Xeon processors from Generation 4 upwards.

5 Reasons to Power Your AI Infrastructure With CoreStart

1

Speed at a Predictable Cost

No costly GPUs or unpredictable cloud resources required. CoreStart includes everything you need to deploy on-premises, in datacenters or at the edge – at speed, and with no additional investment needed.

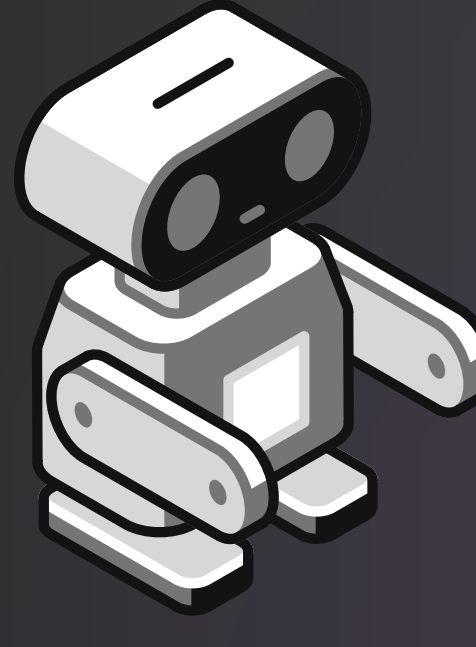

30 Days
Average Deployment Time

2

Customizable Enterprise Solutions

Choose from multiple models – or use your own. CoreStart includes support for an included set of curated, pre-validated models, plus full integration with the Hugging Face library.

Out-of-the-Box

3

From Install to Impact, Without the Friction

Clutch AI delivers expert-led installation with hands-on support from Nutanix throughout deployment. Enterprise AI workshops and end-user training ensure rapid adoption and an AI-ready workforce, so teams can move from setup to production without friction.

Installation Support Included

4

Keep Full Control of Your Sensitive Data

Processing data in the cloud can create unpredictable costs and security risks. Keep your data private and mitigate exposure to cloud-specific security and sovereignty threats. Retain full control over your data, models, and versions.

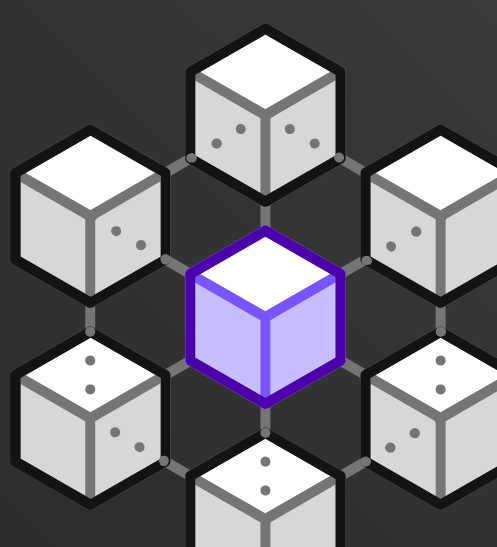

Secure and Compliant
Keep AI Operations in On-prem or Private Environments and Retain Full Control

5

Get Ready for the Future

CoreStart provides a scalable solution that can flex as your AI demands grow while keeping a single, consistent control plane across edge, data center, and cloud.
