

# NCI Flow Network Security Microsegmentation Design Workshop

Product Code: CNS-INF-A-WRK-MCR-STD

## At-a-Glance

Stage: Design

The Nutanix Cloud Infrastructure (NCI) Flow Network Security Microsegmentation Design Workshop offers IT teams in-depth and practical guidance to create a comprehensive design for Flow Network Security which creates software-based firewalls that inspect traffic within the datacenter to protect and isolate workloads, users, and data. IT teams have a choice of scenarios to design for their on-premises NCI cluster or Nutanix Cloud Clusters (NC2). This offer is ideal for the Design stage of a hybrid multicloud journey.

## Related Services

- NCI Flow network Security Microsegmentation Deployment

## Service Scope

Delivered by highly skilled consultants with strong domain expertise and rich experience to ensure that the microsegmentation requirements and required outcomes are identified. Design workshops require collaboration with key customer stakeholders from networking, virtualization, and application teams.

After the design workshop, the consultant develops an NCI Flow Network Security Design document and configuration workbook that addresses requirements, constraints, and assumptions. The workbook also provides a detailed implementation plan and the list of required security policies and categories to be created and attached. The design of the security policies and categories will match one of the following use cases:

- End User Computing – Citrix Virtual Apps and Desktops, Frame
- 3-tier applications – presentation, application, data tiers
- Single-server applications – applications run on a single-server
- Server, service, virtual machine (VM), or environment isolation
- Service insertion and chaining

The service includes the following activities:

- Review AHV networking terminology
- Review features and functions of Flow Network Security, including microsegmentation, network service insertion, and network automation
- Discuss the design goals and gather communication requirements, including risks, constraints, and assumptions
- Assess the current state of systems to be segmented
- Assess network configuration impacts and requirements
- Develop security policies and categories for the selected use case

- Develop an implementation plan, process, and deployment waves
- Develop a post-implementation validation and test plan
- Optionally license and enable Nutanix Flow Network Security

## Limitations

- For each quantity purchased, development of security policies and categories is limited to 10 applications
- Excludes configuration of categories and policies

## Supported Hypervisors

- Nutanix AHV

## Prerequisites

- None

## Required Product Licenses

- None

## Delivered Artifacts

- Configuration Workbook
- Design Document

## Duration

Typically up to 4 days

## Related Products

- Nutanix Cloud Infrastructure (NCI)
- Nutanix Cloud Clusters (NC2)
