

## The Situation

Since its founding in 1886 as a simple spice stand at the side of the road, **Treatt** has been making the world taste and smell a little better. And while spices last a long time, they don't last forever. The same became true of Treatt's IT infrastructure—they had hit the expiration date. With a traditional SAN infrastructure containing disparate servers, networks, and storage, everything was maintained—or upgraded—separately. The 8-gig network and storage system had turned into a bottleneck and impacted everyone—production people, sales, even admin staff. It was time to find a new flavor.

## The Problem

- Disparate infrastructure made for **complex maintenance and upgrade processes**
- Network bottlenecks were slowing everyone down—**the entire business was impacted**
- Working in central Florida with no DR plan was **a catastrophe waiting to happen**

## Nutanix to the Rescue

Reasons **Treatt** chose Nutanix:

- Hyperconvergence offered the best of both worlds—**speed and reliability were incredible**
- Nutanix installation process consisted of **pressing a few buttons and taking lunch**
- The potential to ditch all VM licensing could help **significantly save on costs**

## The Impact

- Single management interface **removed all the complexities of maintenance and upgrades**
- Speed improvements were enormous—**every team felt, and loved, the changes**
- With a rock-solid DR plan now in place—**one cloud in the sky no longer caused a panic**

Even though Treatt isn't a name you're likely to hear frequently, they're still an organization likely to provide some spice in your life—literally. With hyperconvergence in place, Treatt is now an organization feeling a bit bored with their IT infrastructure—and couldn't be happier about it. Faster networking, better storage, and a massive improvement to DR all mean the flavors have really come together—and should last a long time.

“

I believe Nutanix understands that we are not in the business of IT infrastructure and because of that, the end result was seamless in every way.

“

Nutanix has given us room to grow, regardless of the needs and workloads of our individual locations.
