

## The Situation

For some, learning stops when they leave school. But lifelong learning can open up new career doors for those who seek it out. Dairlon Alves, System Analyst at [TechnipFMC](#), was a gardener before he began taking IT courses. But even after he became an IT technician, his education didn't stop there. Unfamiliar with a new system, Nutanix, he set out yet again to invest in himself.

## The Problem

- Finding himself in a new role, Dairlon **wasn't familiar with the Nutanix platform** they used
- With a small team, **Dairlon wanted to contribute more**
- **Wasn't confident enough** to speak up in meetings

## Nutanix to the Rescue

Reasons **Dairlon Alves** chose Nutanix Certifications:

- Nutanix University was a **gateway for independent learning**
- **NCP–MCI and NCM–MCI certifications** would help get him up to speed with his work

## The Impact

- Thanks to Nutanix University, he has a **broader and deeper knowledge of Nutanix technology**
- When he finished the certifications, it became a **source of pride** for both Dairlon and his entire team
- Dairlon can **actively contribute** ideas and solutions to the greater team

Self-directed study takes discipline, but in an industry that's always shifting and evolving, it might be the only way to stay ahead of the curve. Certifications initially seemed daunting—especially given the language barrier—but Dairlon persevered and is now more confident in his skills than ever before. He speaks up in meetings and his team appreciates his contributions. All it took was a couple of months of hard work.

**Dairlon Alves**  
System Analyst at TechnipFMC

“

Thanks to Nutanix University, I have a broader and deeper knowledge of Nutanix technology. I'm making a difference in improving our IT environment, and I contribute so much more to my team.

“

Having gone through this experience, I'm much more confident in not only my management capabilities but also in myself. I went from being unknown to being a valuable member of my new team.

**Dairlon Alves**  
System Analyst at TechnipFMC
