

## The Situation

Located in Omaha, Nebraska, [Millard Public Schools](#) aims to bring a world-class education to their 24,000 students. In 2007, every school building was a silo. There was very little centralized technology management, and building technicians managed the technology at individual schools. That led to inequities from site to site. Their disparate setup and lack of a true disaster recovery solution sent them searching for a better solution.

## The Problem

- **Little centralized IT** made management difficult
- **No disaster recovery** left them in a precarious position
- Lack of uniform IT stack led to **inconsistent experiences for students**

## Nutanix to the Rescue

Reasons **Millard Public Schools** chose Nutanix:

- **IT partner Choice Solutions** pointed them in the right direction
- Nutanix sales rep outlined **disaster recovery features as well as cybersecurity**
- **Citrix could run on top of Nutanix**, which would streamline VDI

## The Impact

- **Upgraded all infrastructure and added DR** with minimal increase in infrastructure budget
- Can now offer **flexible and powerful learning technology to their students**
- Have created a **long-term plan for their IT infrastructure**

Creating a world-class educational experience for 24,000 students is no easy task. But without consistent and reliable IT infrastructure, it's downright impossible. Thanks to Nutanix and IT partner Choice Solutions, the IT team at Millard Public Schools has retooled their data center, offered flexible and powerful learning technology to their students, and created a long-term plan for their IT infrastructure. The future looks bright for the leaders of tomorrow.
