

# Nutanix and Cirrus Data

## Automated Workload Mobility: Simplify, Accelerate, Secure

### Key Benefits

- Live data migration to Nutanix.
- Integrated and automated for seamless migration to Nutanix AOS or AHV.
- 100% SaaS-based solution with no requirement for interim storage or virtual appliances.
- Simplifies deployment with no additional footprint, extra downloads or additional steps to complete migration.
- Automated and secure migrations from leading hypervisors or any block storage to Nutanix.
- Increase availability with near-zero downtime, including cutovers for all migrations with Cirrus Data

## Seamlessly migrate from any block storage or hypervisor to Nutanix AOS storage and AHV virtualization

Cirrus Data Solutions simplifies block storage and hypervisor migrations with a modern, SaaS-based approach that delivers speed, security, and automation. Cirrus Migrate Cloud integrates directly with Nutanix AOS and AHV hypervisor, enabling seamless, point-and-click migrations without additional appliances or complex manual configurations.

MigrateOps™ from Cirrus Data delivers intelligent automation, providing prebuilt, customizable migration programs to transition from VMware and other hypervisors to Nutanix AHV without operational disruption.

With deep integration into Nutanix Prism Element, Cirrus Migrate Cloud eliminates time-consuming manual tasks by automating storage

provisioning, driver installation, network configuration, and IP assignments. Whether workloads reside on-premises, in the cloud or within a hybrid environment, organizations can migrate to Nutanix with just a click.

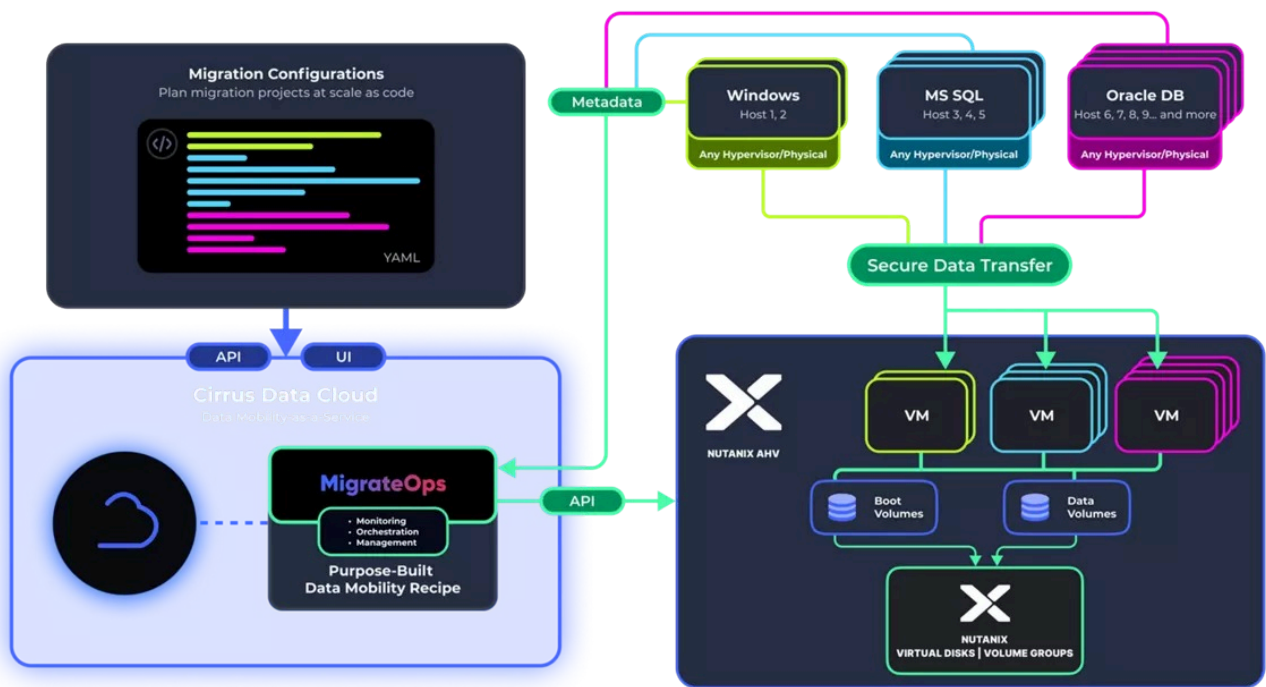

Cirrus Data and Nutanix empower IT teams to modernize infrastructure faster. Together, we provide an automated, secure and predictable migration experience that reduces the risk and complexity of traditional migrations while unlocking the full potential of the Nutanix Cloud Platform.

## Automated Data Mobility

### Ready to diversify your virtual environment?

Now is the time to add a second vendor as you prepare to accelerate AI adoption, develop cloud-native applications and transition to hybrid multicloud IT operations. With a seamless migration path to Nutanix, Cirrus Data reduces manual processes, risk, complexity, and downtime.

- **Faster, more reliable storage migration:** Manually transferring data between storage environments is time-consuming and prone to errors. Cirrus Migrate Cloud automates block-level replication to Nutanix storage, which preserves volume configurations and ensures data consistency and integrity.
- **Seamless VM provisioning and configuration:** Instead of manually recreating virtual machines, Cirrus Migrate Cloud automates VM provisioning on Nutanix AHV. This allows precise replication of source configurations, reduces human errors and accelerates deployment.
- **Automated network and security setup:** Network settings, VLANs and IP configurations often require manual adjustments when migrating workloads. Cirrus Migrate Cloud automates network mapping to enable seamless connectivity and security compliance without manual intervention.
- **Effortless driver installation and system optimization:** Migrating workloads traditionally requires manually installing drivers and fine-tuning performance settings. Cirrus Migrate Cloud automates this process and enables workloads to operate efficiently post-migration.
- **Intelligent cleanup of migration resources:** Temporary migration artifacts, such as intermediate network configurations and staging storage volumes, must be manually removed after migration. Cirrus Migrate Cloud automates cleanup and eliminates unnecessary resource consumption.
- **Built for data mobility:** Today's IT environments span multiple datacenters, public clouds and edge locations. Cirrus Migrate Cloud easily integrates with all block storage architectures, enabling businesses to migrate workloads to Nutanix with a single click – on-premises and in the cloud. No specialized migration expertise required.

## Your Data. Your Choice.

With Nutanix AHV and the Nutanix Cloud Platform, organizations benefit from high availability, built-in security and automation that simplifies IT operations. Cirrus Data extends this flexibility by providing seamless, automated data mobility across all block storage and hypervisor environments. With over 4,000 successful migrations, Cirrus Migrate Cloud enables IT teams to transition workloads without unexpected downtime or complexity.

## Let's Get Started

There is no better time to start diversifying than today. Cirrus Data can make your transition to the Nutanix Cloud Platform a snap. To learn more, download the [Guide to Virtualization Optimization](#) or request a [free trial](#).
